

BORIS EMAKAM GARCIAL

IT SUPPORT • APPLICATION SUPPORT • SOFTWARE DEVELOPMENT • PYTHON AUTOMATION

Regina, SK | 306-501-8017 | borisemakam@gmail.com

Portfolio: datascientistandai.github.io | LinkedIn: linkedin.com/in/boris-emakam-b77974290/ | GitHub: github.com/datascientistandAI

PROFESSIONAL PROFILE

AI-augmented IT, application support, and software development professional with hands-on experience supporting users, troubleshooting hardware and software, and building reliable systems across Windows, Linux, web, and database environments. Built Django applications and API-driven document workflows during a software engineering internship at MTN Cameroon, while independently developing Python automation and advanced time-series ML systems. Known for structured diagnosis, clear documentation, responsible use of AI-assisted tools, and the ability to explain technical problems to non-technical users. Bilingual in English and French.

TECHNICAL CAPABILITIES

IT support: End-user troubleshooting, incident triage, hardware/peripheral setup, POS support, software updates, remote support, documentation, knowledge-base practices

Systems & networking: Windows 10/11, Ubuntu, Debian, macOS, TCP/IP, DNS/DHCP fundamentals, VPN concepts, VirtualBox, WSL, Apache2, routing and firewall fundamentals

Software & automation: Python, Bash, SQL, Django, REST/API integration, PHP, HTML/CSS, JavaScript, C/C++, Git/GitHub, MySQL, VS Code, Jupyter, PyCharm

AI, data & quality: Azure Document Intelligence, LLM-assisted workflows, pandas, LightGBM, Transformers, PyTorch, reinforcement learning, DuckDB, time-series pipelines, validation, debugging, leakage and failure-mode analysis

Work style: Structured problem solving, user communication, technical writing, requirements analysis, testing mindset, bilingual English/French communication

PROFESSIONAL EXPERIENCE

Customer Service Representative | Canadian Tire

2024 - Present

Regina, SK

- Resolve approximately 14 customer questions per day through in-person, phone, and email interactions by identifying the issue, explaining the solution, and escalating appropriately.
- Document resolutions and contribute to knowledge-base updates, strengthening repeatable support practices and clear communication.
- Assist with POS-system troubleshooting and peripheral issues while maintaining service continuity in a high-volume environment.
- Received a Customer Service Award for dependable performance, communication, and customer support.

Software Engineering Intern | MTN Cameroon

Jul 2025 - Sep 2025

Cameroon

- Built and refined a Django-based Design-Assist application that transformed business requirements into structured BRS/SRS documentation workflows.
- Integrated Azure Document Intelligence and prompt-assembly workflows, then added validation, logging, authentication, activity tracking, and Word/PDF export capabilities.
- Translated stakeholder needs into backend views, data flows, templates, technical documentation, and UML artefacts; debugged implementation issues through iterative testing.
- Worked across application logic, document processing, user access, and auditability—experience directly relevant to application support and internal business systems.

Junior IT Technician | Cyber Café

2022 - 2023

Douala, Cameroon

- Installed and updated hardware and software, prepared workstations, and supported users with routine technical issues.
- Set up and dismantled IT equipment for meetings and events, verifying connectivity and operational readiness.
- Participated in recurring security and backup checks, developing disciplined habits around system reliability and data protection.

SELECTED TECHNICAL PROJECTS

Global Help Desk System | [Support workflow and troubleshooting platform](#)

- Designed a help-desk workflow for ticket intake, categorization, assignment, status tracking, resolution notes, and administrator oversight.
- Applied software-engineering principles to make technical problems traceable, repeatable, and easier to escalate or resolve.

MTN Design-Assist Workflow | [Django](#) • [APIs](#) • [document intelligence](#)

- Developed a practical business-document workflow that combined structured requirements, automated extraction, human verification, logging, and exportable deliverables.

Archeo-IT Web & Infrastructure Project | [Linux](#) • [Apache](#) • [MySQL](#) • [PHP](#) • [VirtualBox](#)

- Built and hosted a dynamic web application in a virtualized environment; configured a LAMP stack, internal routing, and firewall rules.
- Created a Python secure-password generator, demonstrating scripting and automation applied to an operational IT context.

FILM-BPC Macro Trader V8 | [Python](#) • [time-series ML](#) • [reinforcement learning](#)

- Designed a world-model bottleneck architecture separating quantile rollout forecasting, zero-parameter mechanical barrier logic, decision heads, regime context, and ensemble fusion; evaluated leakage, bias, regime instability, transaction costs, and failure modes.

Trading Data Plane | [Python](#) • [DuckDB](#) • [point-in-time data engineering](#)

- Built a concurrent data pipeline in which market, macro, news, sentiment, positioning, and event sources converge into validated training snapshots protected by coverage, point-in-time, schema, replay-parity, and resilience gates.

Gradient Resurrection: Continual Learning Controller | [PyTorch](#) • [continual learning](#) • [theoretical ML](#)

- Developed a trust-scaled preservation controller with a local-validity bound and reproducible benchmarks; reported the failed compositional-factorization extension hypothesis as an explicit negative result.

EDUCATION

Bachelor of Science, Computer Science (Data Science) | University of Regina

2023 - Expected Jun 2027

Regina, SK

- Relevant foundation: operating systems, software engineering, databases, networking, programming, data science, mathematics, and system analysis.

Bachelor of Technology, Computer Science | University of Douala

2021 - 2023

Douala, Cameroon

ADDITIONAL INFORMATION

Bilingual: English and French | Valid driver's licence and personal vehicle | Available for onsite, hybrid, and remote technical support roles
